Summary

Experienced Senior Analytics Platform Engineer with extensive expertise in designing and implementing healthcare data platforms that improve patient outcomes. Proven track record of leading technical teams and delivering HIPAA-compliant, scalable analytics solutions that support clinical decision-making while maintaining the highest standards of patient safety and regulatory compliance.

Top Skills

- Healthcare Data Architecture
- Clinical Analytics Platforms
- HIPAA Compliance & Security
- Real-time Data Processing
- Technical Leadership & Mentoring
- Clinical Workflow Integration

Languages

- **English** (Native)
- **Mandarin** (Professional)

Certifications

- AWS Certified Solutions Architect - Professional
 - Microsoft Azure Data Engineer Associate
 - Google Cloud Professional Data Engineer
 - HL7 FHIR Implementation Specialist
 - Certified Information Systems Security Professional (CISSP)
-

Experience

MedTech Analytics Solutions

Senior Analytics Platform Engineer *February 2019 - Present (6 years 8 months) Boston, Massachusetts, United States*

Leading healthcare analytics platform development for major healthcare providers, research institutions, and public health organizations. Responsible for architecting HIPAA-compliant, scalable data solutions that directly impact patient care and clinical outcomes.

- Architect and implement analytics platform strategy to support clinical and research applications, including technology roadmap development and cross-team collaboration with clinical stakeholders
- Lead engineering initiatives of 8-12 engineers through technical leadership, system design, and quality assurance ensuring reliable, scalable platform delivery meeting healthcare compliance requirements
- Build advanced analytics infrastructure including real-time data processing, clinical data warehouses, and machine learning platforms supporting evidence-based healthcare applications
- Partner with clinical teams, data scientists, and product managers to understand healthcare workflows and technical requirements, identifying opportunities to improve patient care through better data utilization
- Implement production-grade healthcare data platforms and cloud infrastructure following HIPAA compliance requirements and healthcare industry best practices
- Drive evaluation of healthcare-specific technologies and integration approaches, including clinical data standards (HL7, FHIR) and interoperability frameworks resulting in 40% improvement in data accessibility

HealthData Systems Corp

Principal Healthcare Data Engineer *(January 2017 - January 2019)* **Senior Data Platform Developer** *(March 2015 - December 2016) Cambridge, MA*

Led the design and implementation of clinical data platforms for mid-market healthcare organizations. Specialized in healthcare informatics and regulatory compliance for data systems.

- Architected and implemented clinical data lakes and analytics platforms processing 100+ million patient records across multiple healthcare systems
- Developed HIPAA-compliant infrastructure as code templates and DevOps pipelines that became standard practice across the healthcare engineering organization
- Mentored junior engineers and established technical best practices for healthcare data platform development with focus on patient safety
- Collaborated with clinical informatics specialists and platform architects to establish standards and ensure consistency across healthcare technology ecosystem

ClinicalTech Innovations

Senior Healthcare Data Engineer *August 2013 - February 2015 (1 year 6 months) Boston, MA*

- Led healthcare data platform modernization initiatives and developed cloud migration strategies for healthcare providers while maintaining regulatory compliance
- Implemented ETL/ELT pipelines and clinical data integration solutions using modern healthcare-specific tools and FHIR standards
- Designed and built real-time clinical data streaming platforms supporting critical care applications with 99.99% uptime SLA
- Contributed to healthcare engineering excellence through technical mentoring, architecture reviews, and participation in clinical advisory processes

ClinicalTech Innovations is a leading provider of healthcare data transformation and clinical analytics solutions for healthcare enterprises.

BioMed Data Consulting

Healthcare Data Solutions Engineer *June 2011 - July 2013 (2 years 1 month) Boston, MA*

- Designed and implemented clinical data warehouse solutions and healthcare business intelligence platforms for hospitals and research institutions
- Developed SQL-based clinical analytics solutions and automated reporting systems that improved clinical decision-making processes
- Created technical documentation and conducted training sessions for clinical and technical teams on healthcare data standards
- Assisted in clinical database design and optimization projects to improve query performance while maintaining patient data security

BioMed Data Consulting specializes in clinical data analytics and healthcare intelligence solutions for medical organizations.

Regional Health Systems

Junior Clinical Data Analyst *September 2009 - May 2011 (1 year 8 months)*

Supported clinical data analysis and reporting initiatives across multiple healthcare projects:

- Developed automated clinical data processing workflows and quality monitoring systems to ensure data accuracy and patient safety
 - Created interactive clinical dashboards and visualization tools for physician reporting and operational monitoring
 - Assisted in clinical database design and optimization projects to improve query performance and system scalability while maintaining HIPAA compliance
-

Education

Harvard T.H. Chan School of Public Health

Master of Science (MS), Health Data Science and Biomedical Informatics *2007 - 2009*

Boston University

Bachelor of Science (BS), Computer Science and Biomedical Engineering *2005 - 2009*
